

why you should not program in node.js

abi raja

A way to write (web)
applications/servers in
js

Hello World\r\n

acabee.org

“if we stacked up all the textbooks from elementary to high school, and then got the best teacher in the world to make one video on each of these topics, how much would it cost?”

who uses node?

- yahoo!
- palm (WebOS)
- lots of companies have some node services
- nodeKO

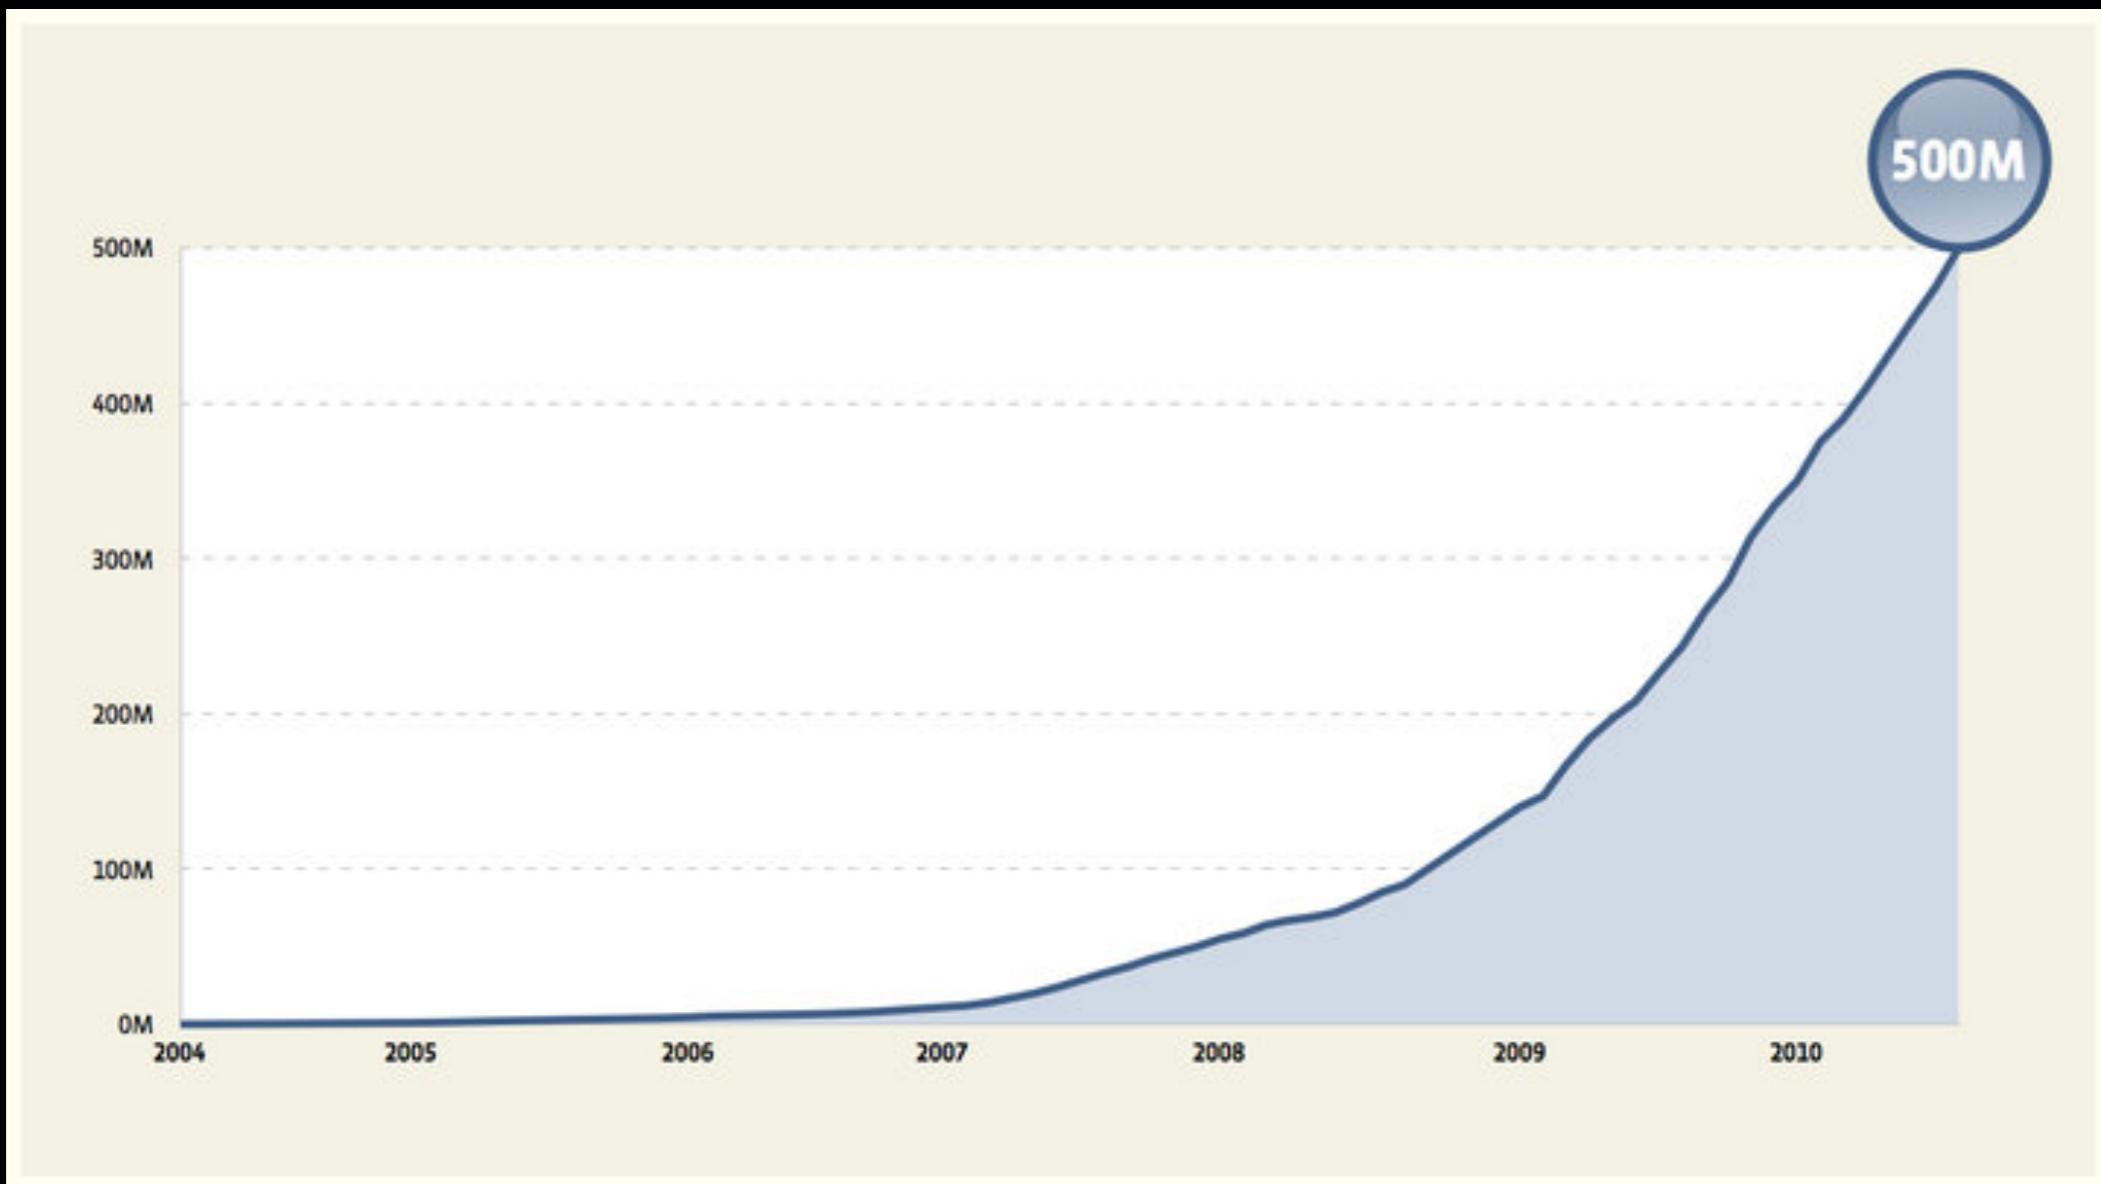

Don't ever use
node.js

... unless you want to learn a ton about
complex, beautiful man-made systems.

No, but really, node
can be quite a pain
sometimes

The bane of high-level languages

Let's build the perfect
server!

JavaScript is (going to be) the
fastest dynamic
language

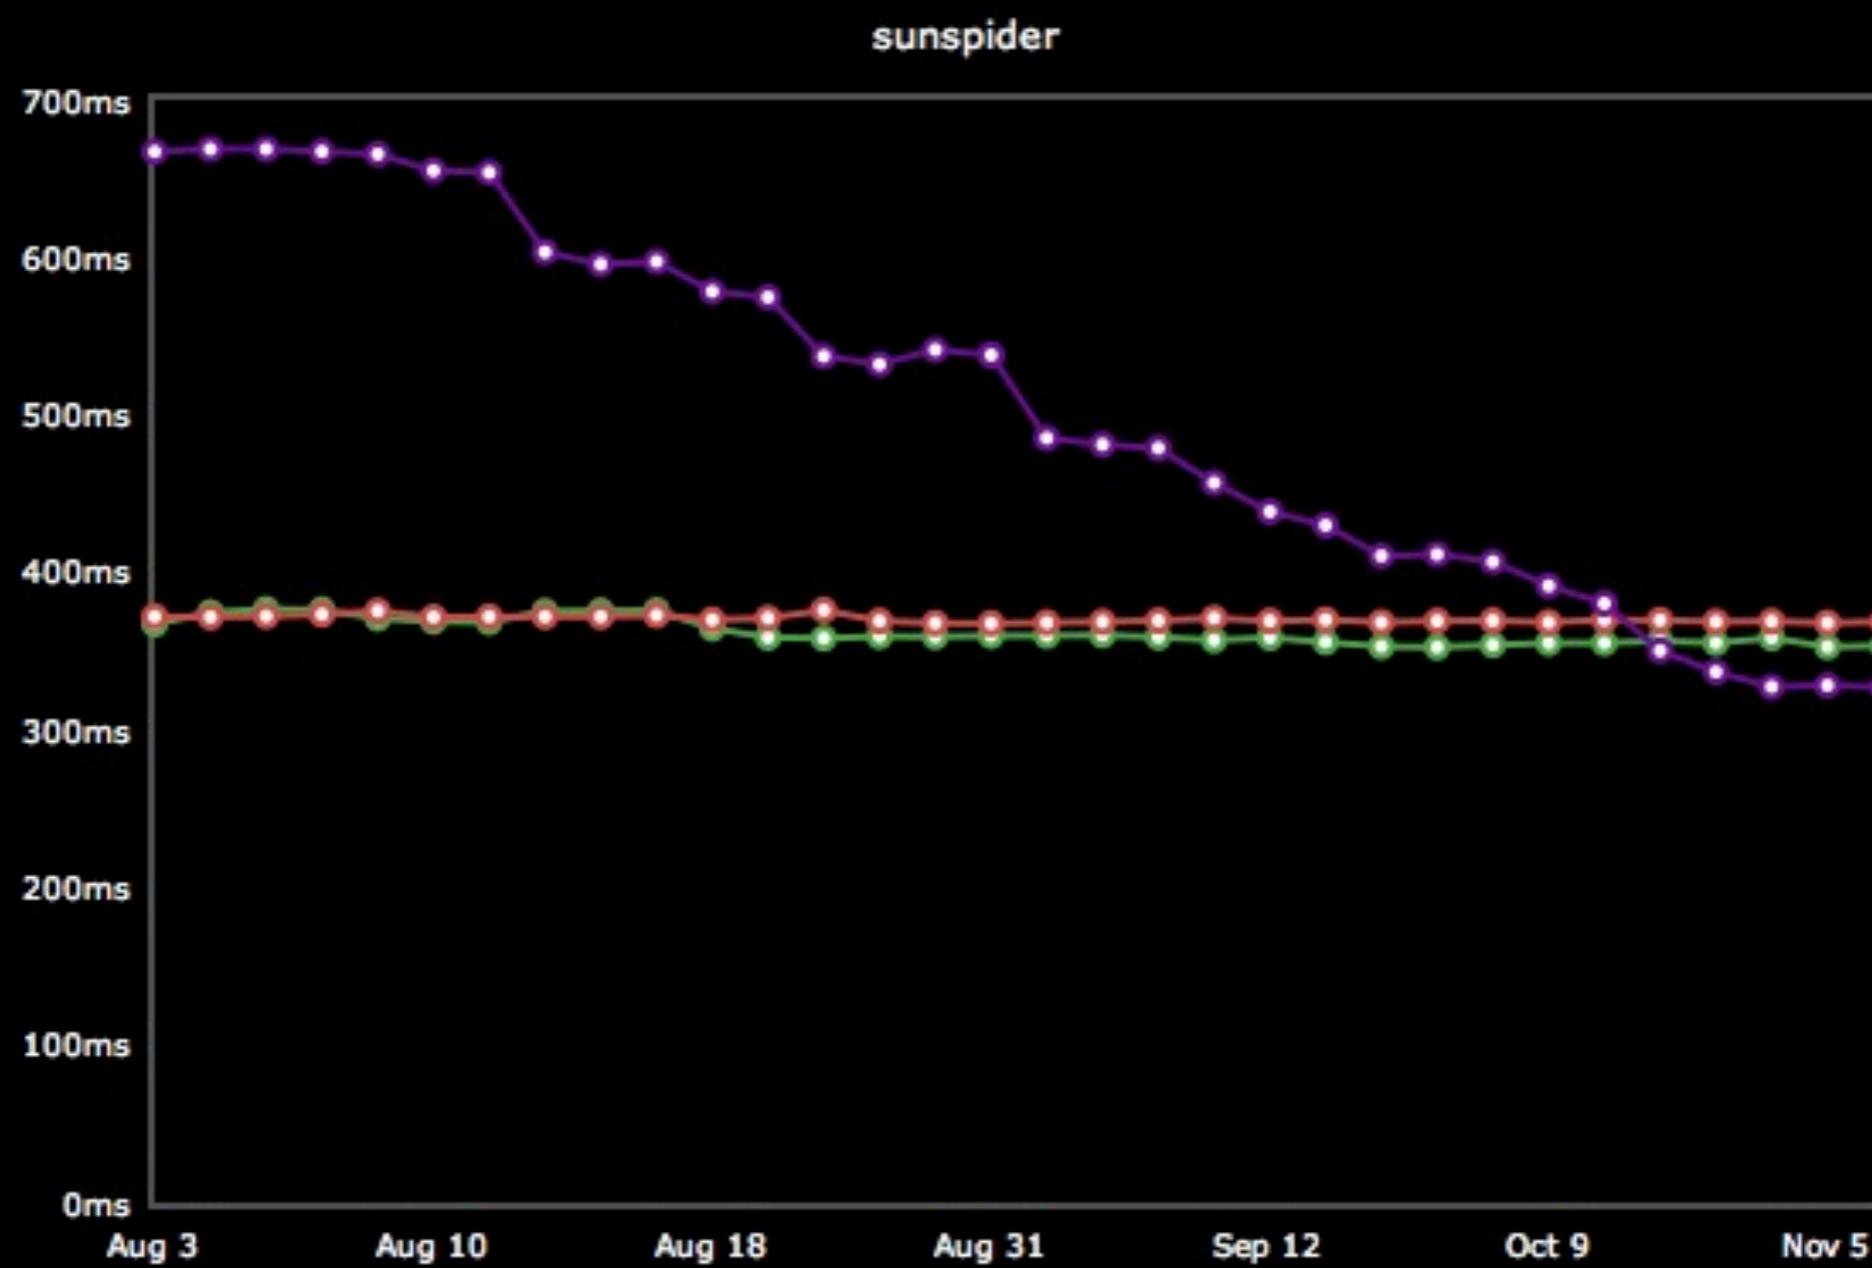

js

x	Program Source Code	sort CPU secs	sort Elapsed secs	M
1.0	C GNU gcc #7	12.10	12.11	
1.1	Java 6 -server #2	12.90	12.92	
1.1	Scala #4	13.25	13.28	
1.1	C++ GNU g++ #6	13.50	13.51	
1.3	Java 6 -server	15.80	15.84	
1.5	ATS #3	17.70	17.71	
1.5	ATS	18.13	18.14	
1.6	Scala #2	18.92	18.97	
2.6	Clean #3	31.01	31.03	
2.6	Haskell GHC	31.13	31.15	
2.8	Lisp SBCL	33.53	33.55	
2.9	C GNU gcc	34.52	34.53	
3.0	Pascal Free Pascal	36.30	36.30	
3.1	Erlang HiPE	38.06	38.06	
3.3	JavaScript V8	39.81	39.84	
3.3	C++ GNU g++ #2	40.49	40.50	
3.4	OCaml OCaml 3.12.1	41.87	41.89	

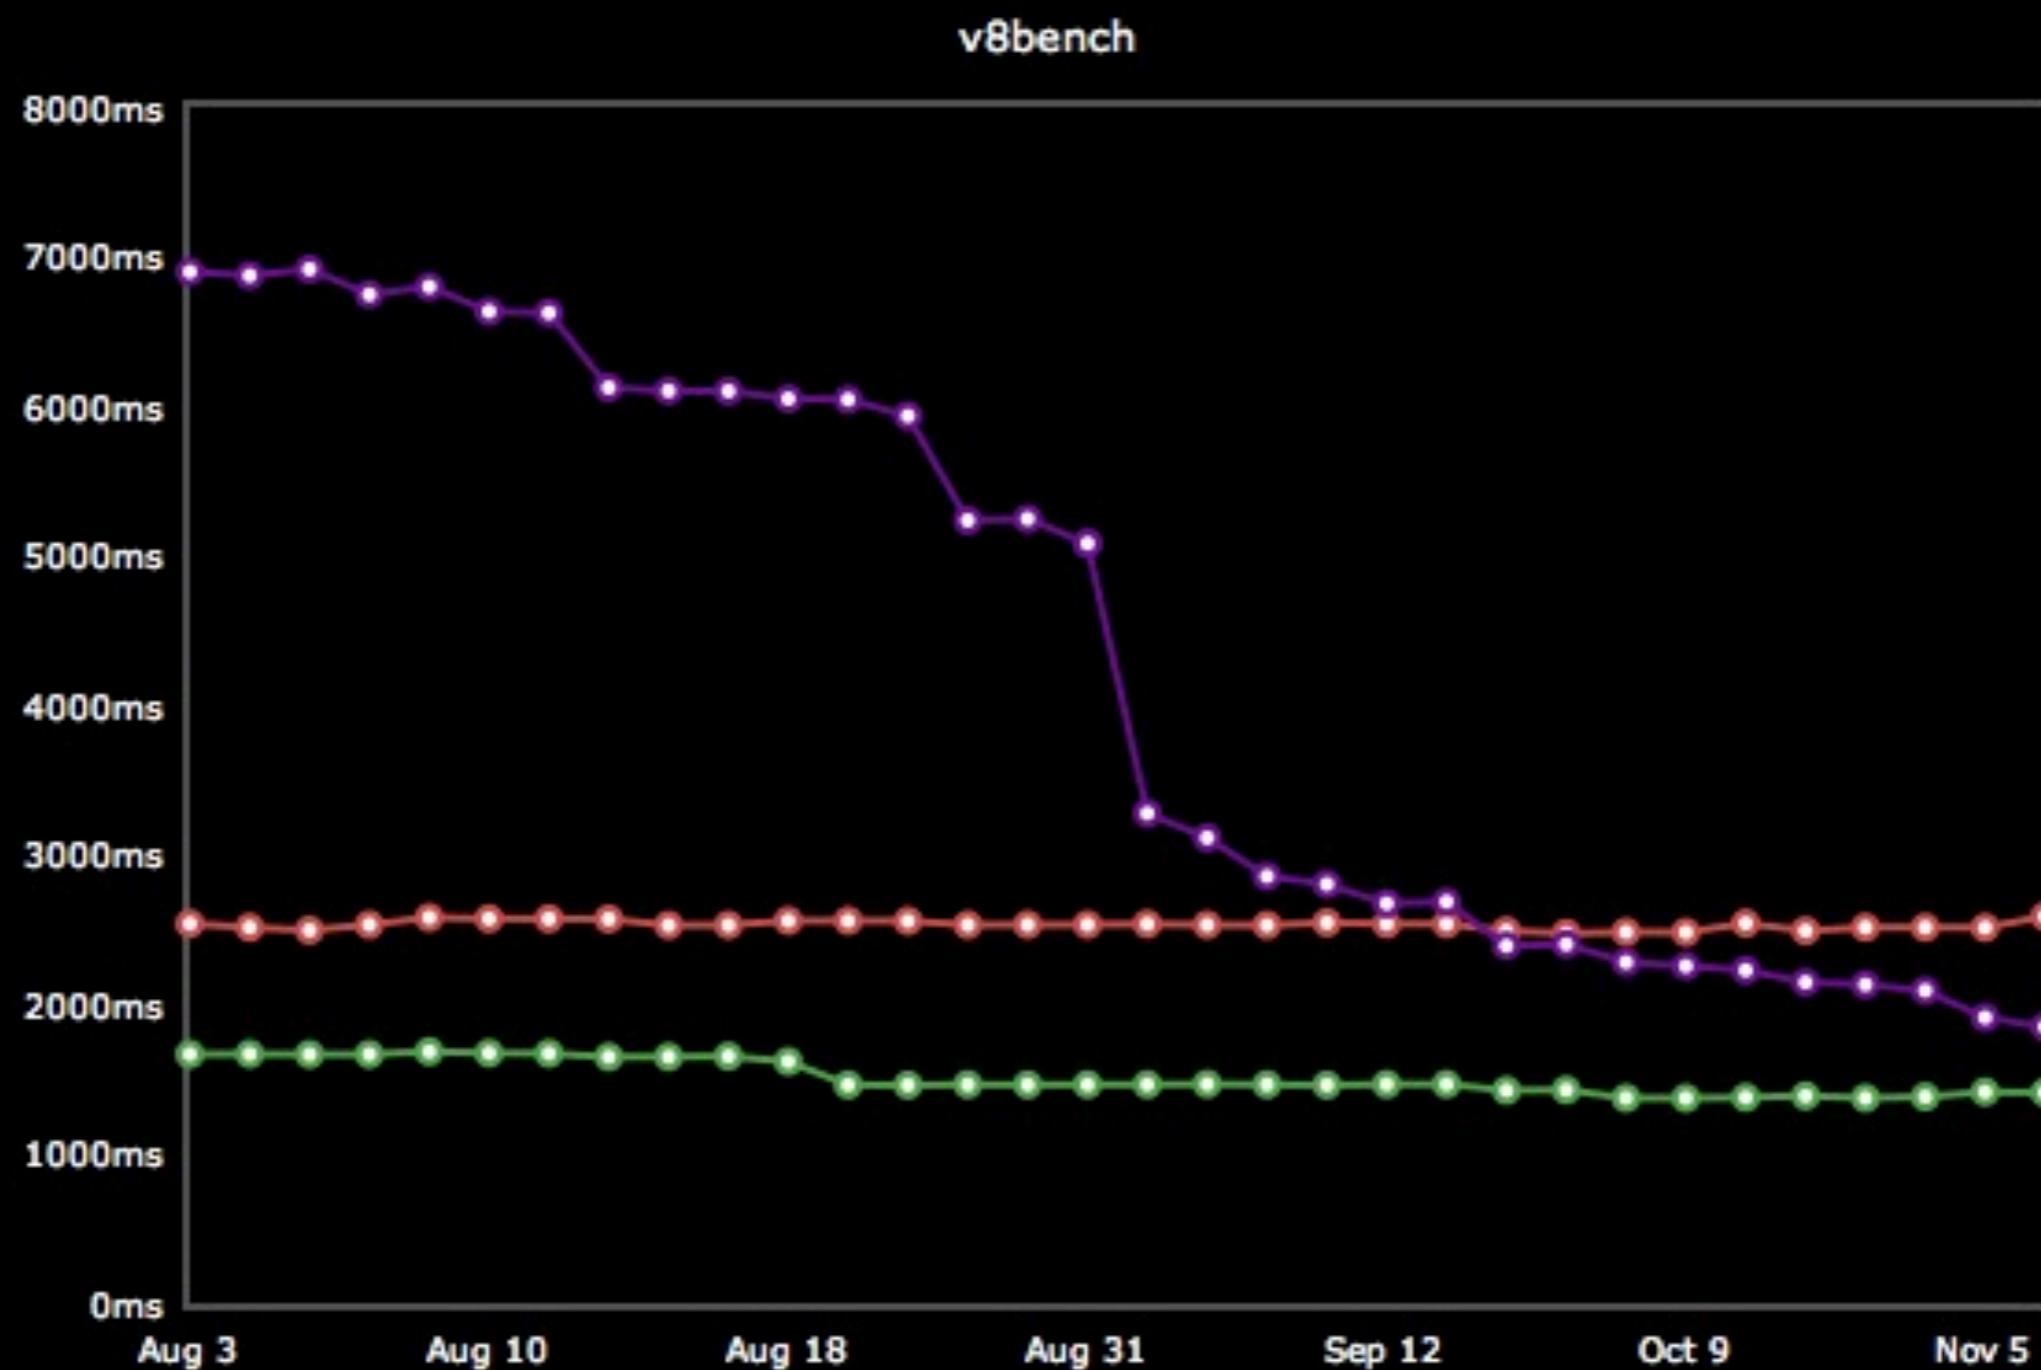

snakes, gems and crap

22	Ruby 1.9	267.52	267.58
27	Python PyPy #2	5 min	5 min
32	Python IronPython #2	6 min	6 min
37	Python CPython #7	7 min	7 min
37	Ruby JRuby	7 min	7 min
43	Python CPython #2	8 min	8 min
43	Python CPython #6	8 min	8 min
44	Python 3 #7	8 min	8 min
48	Lua #2	9 min	9 min
51	Python 3 #6	10 min	10 min
67	Perl	13 min	13 min
104	Perl #2	20 min	20 min
126	PHP #3	25 min	25 min
155	Ruby MRI	31 min	31 min
220	PHP #2	44 min	44 min

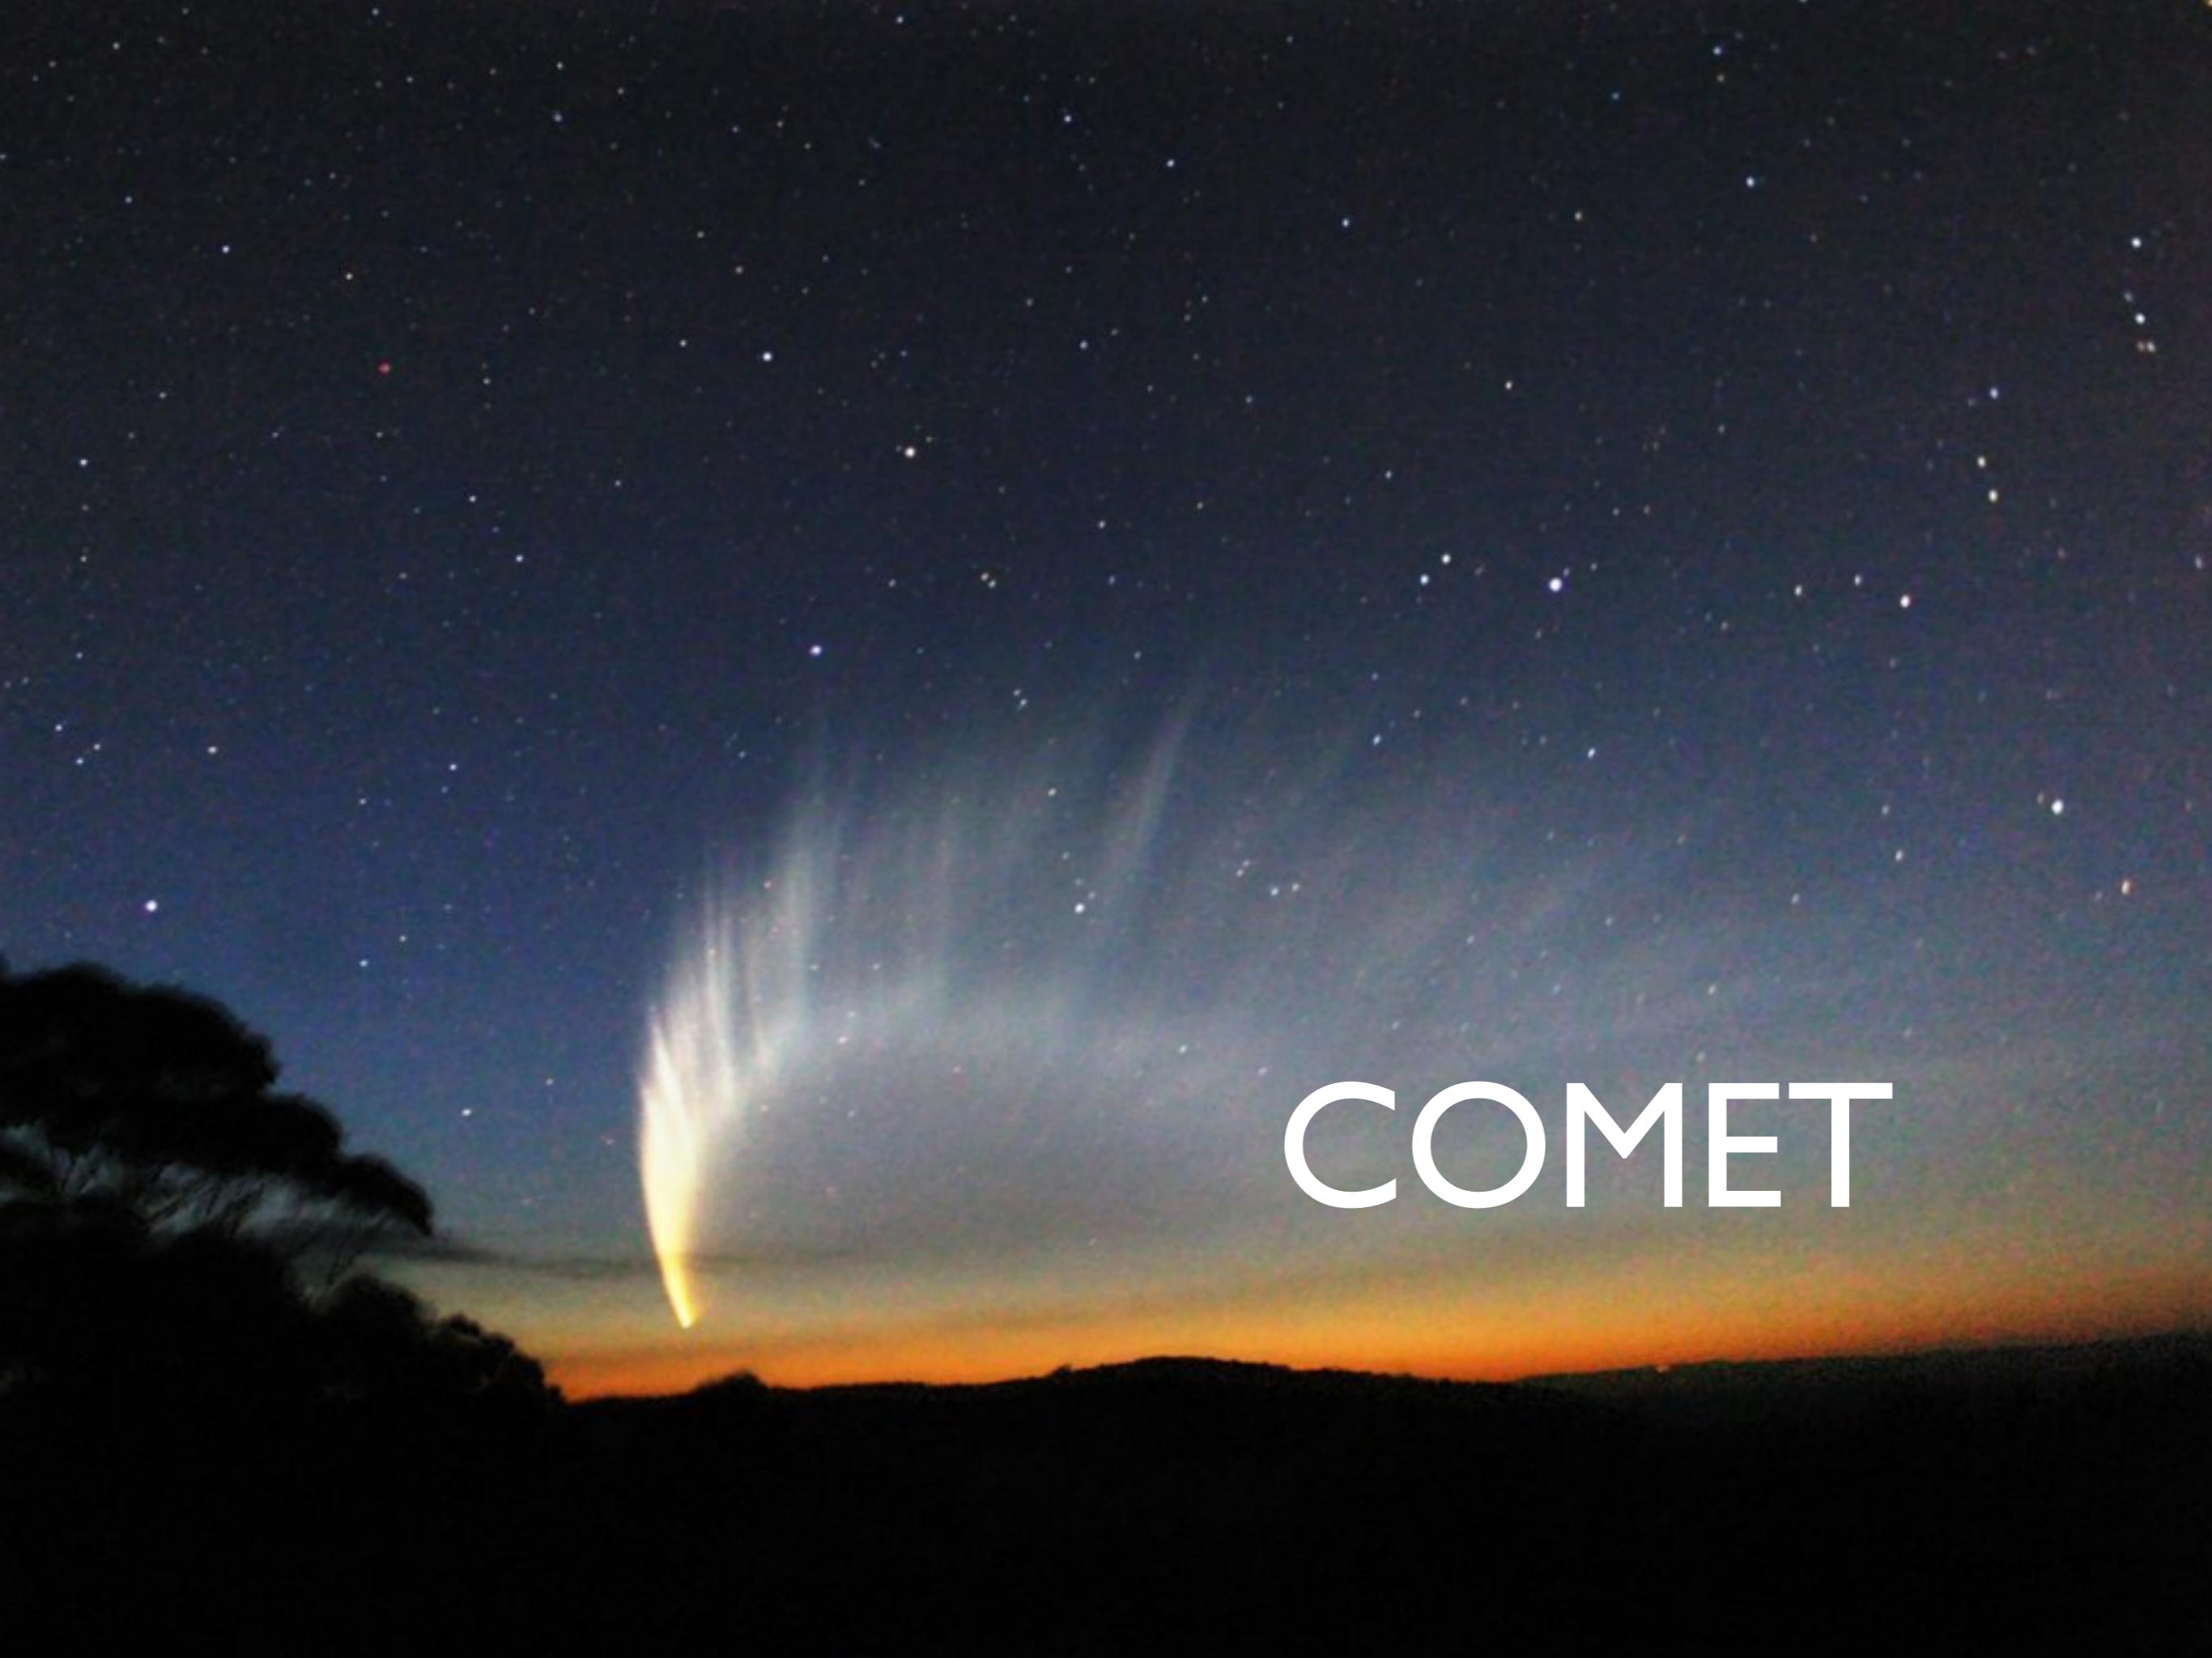

v8 / JagerMonkey

v8 / JagerMonkey

Depending on who you are,
you either think it's the ugliest
language or the most beautiful
language

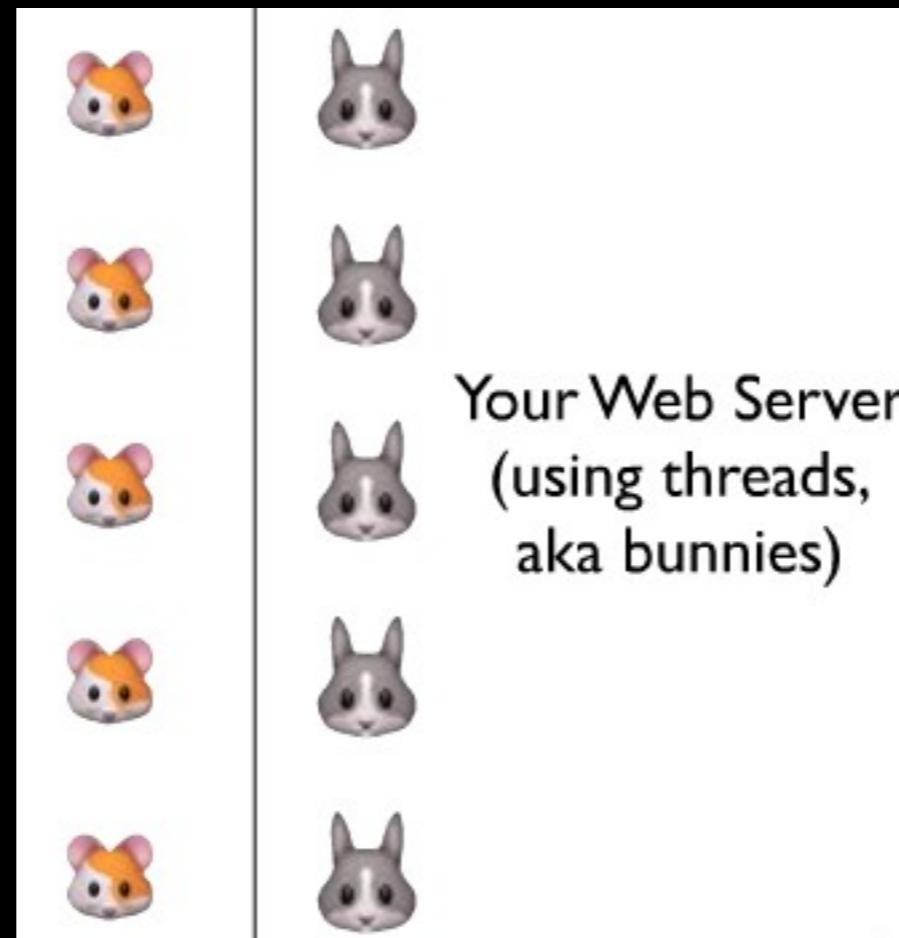

COMET

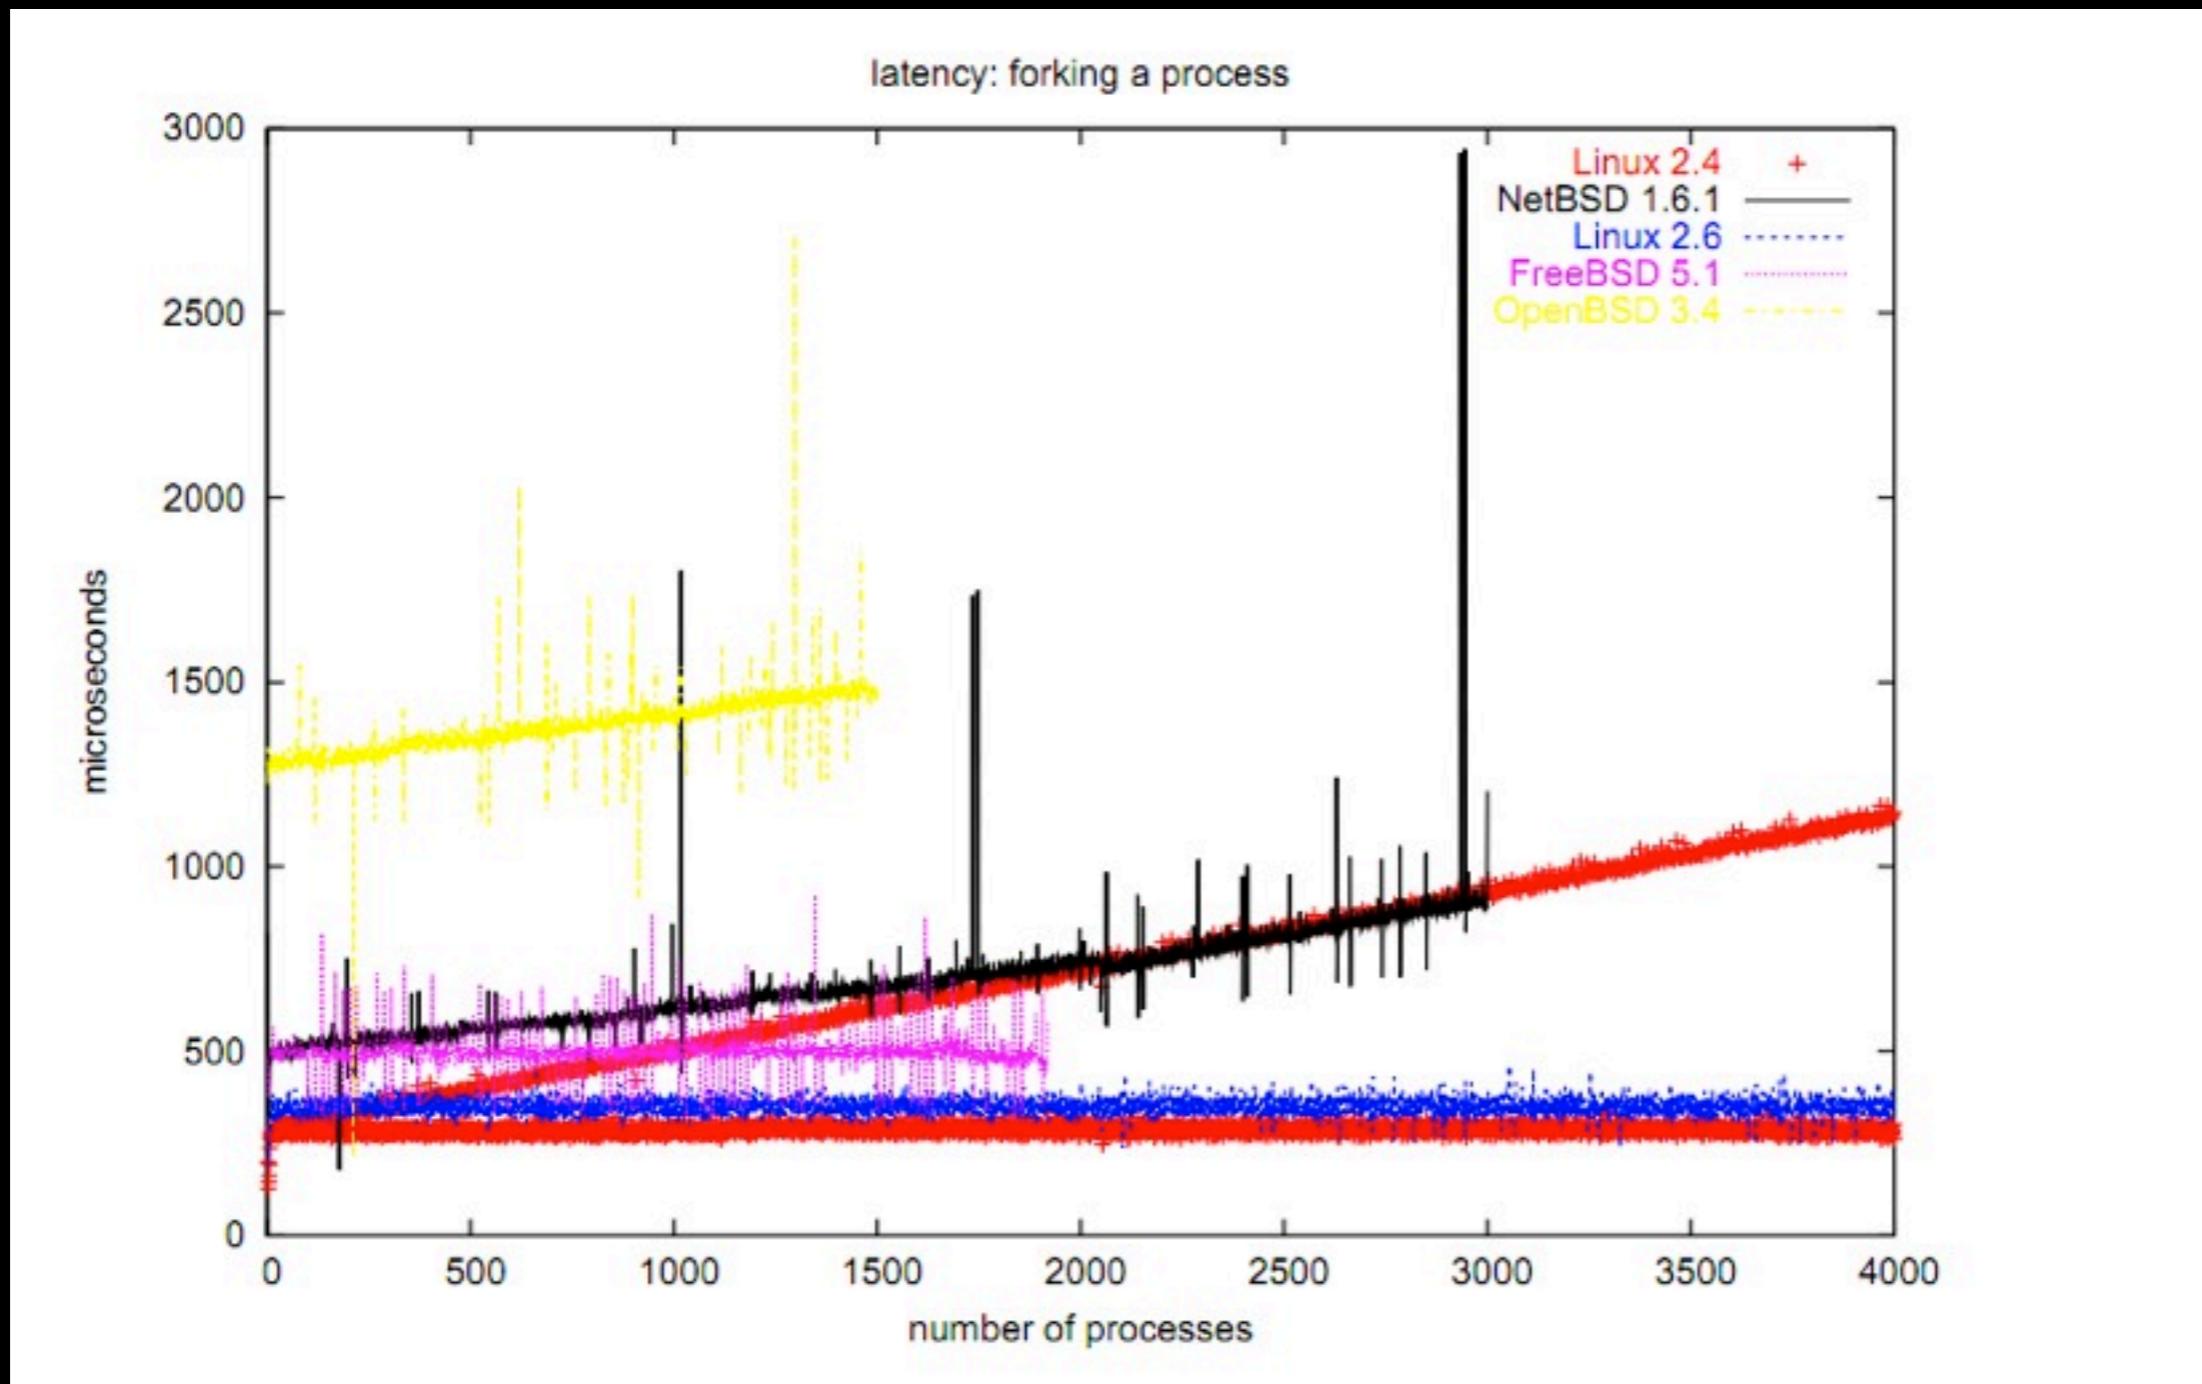

elements of perfection

- js
- event loops are better than threads

bunnies

threads/processes

context switching

Here is a `vmstat`, running an MP3 player:

procs			memory			swap		io		system			cpu	
r	b	w	free	buff	cache	si	so	bi	bo	in	cs	us	sy	id
0	0	0	60316	9136	316280	0	0	135	113	47	8	8	9	82
0	0	0	60296	9152	316280	0	0	0	0	200	54	3	0	97

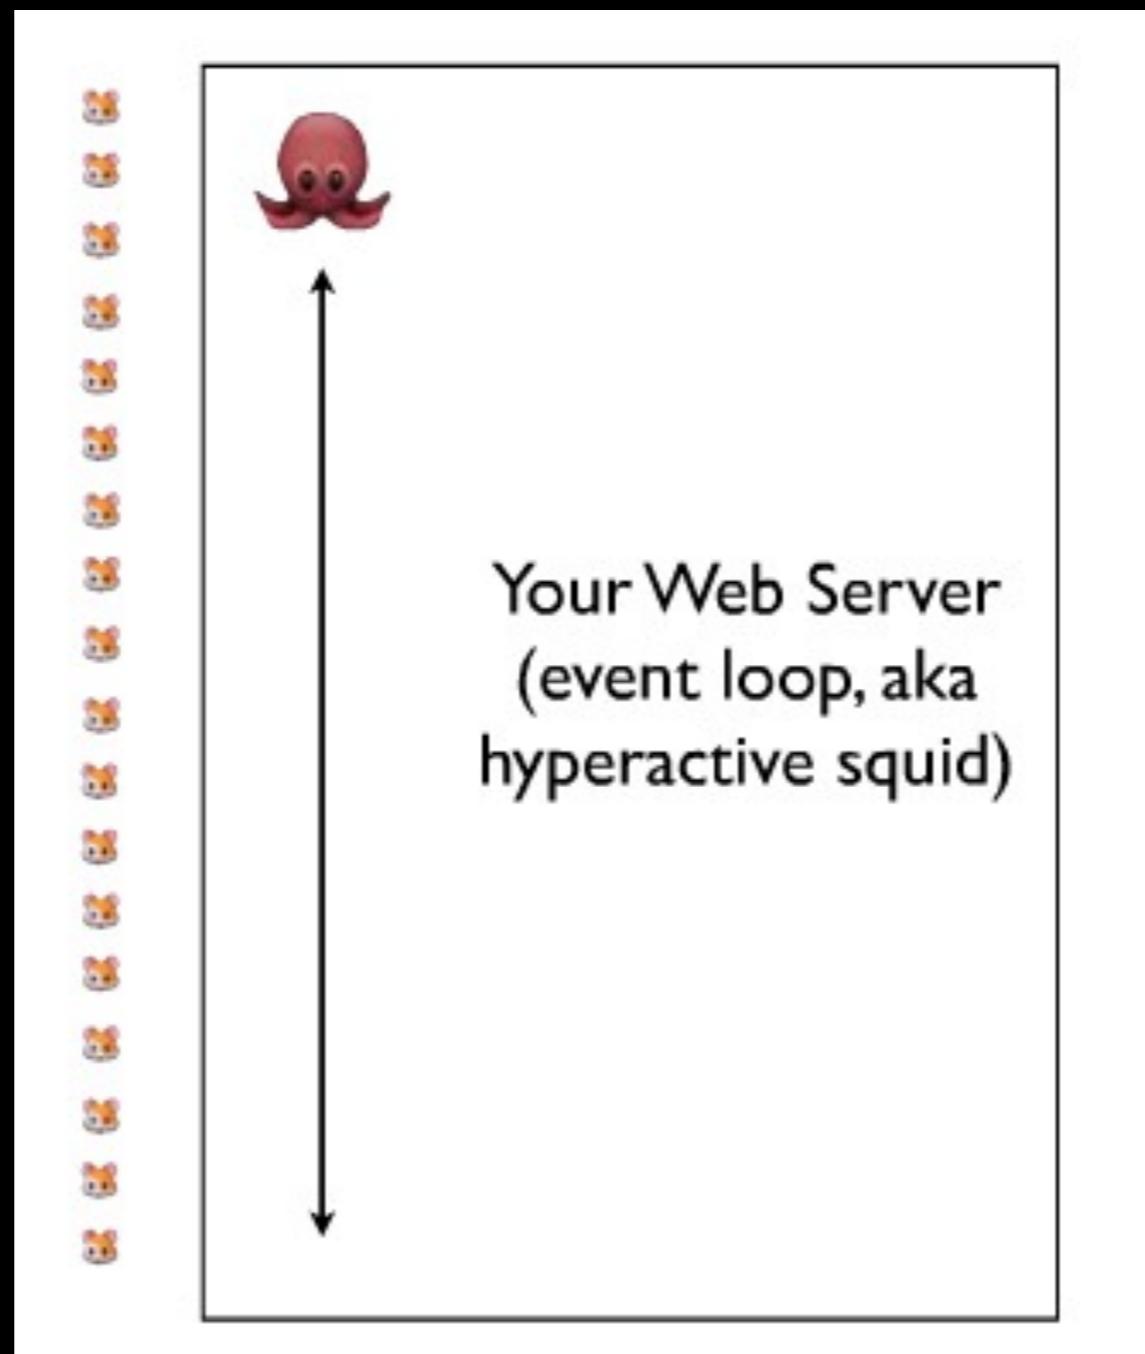

And now with `httpbench` running over `lo` and `eth0`:

4	0	0	56136	9236	317936	0	0	24	0	228	7953	6	59	35
0	0	0	56308	9236	317936	0	0	0	0	221	1590	4	10	86
4	0	0	53476	9304	320180	0	0	0	0	16416	12319	26	74	0
5	0	0	52552	9304	320180	0	0	0	0	16391	12307	20	80	0

impatient hamsters

	 fetching a web API (2 seconds)
	 uploading an image (3 seconds)
	 fetching a web API (2 seconds)
	 fetching a web API (2 seconds)
	 comet long polling (10 seconds)

squids

event loops are cool

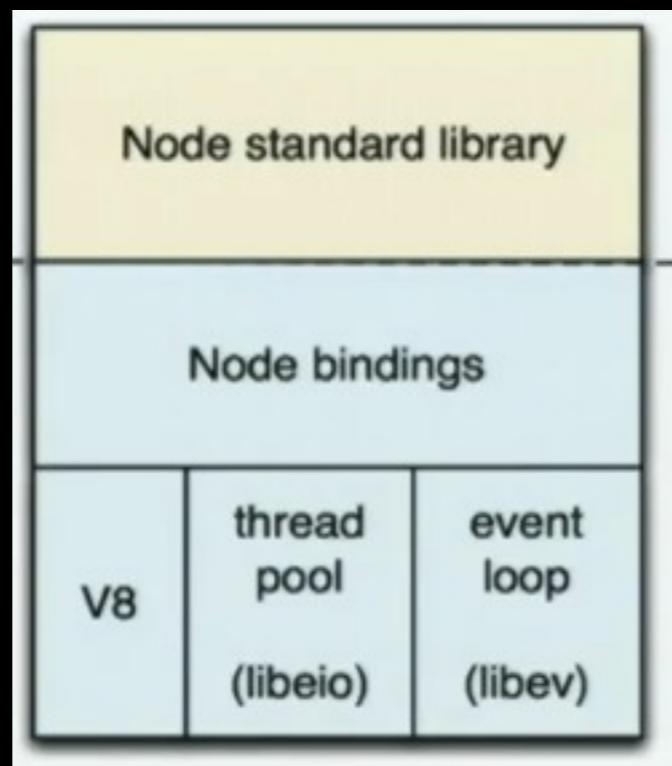

non-blocking I/O

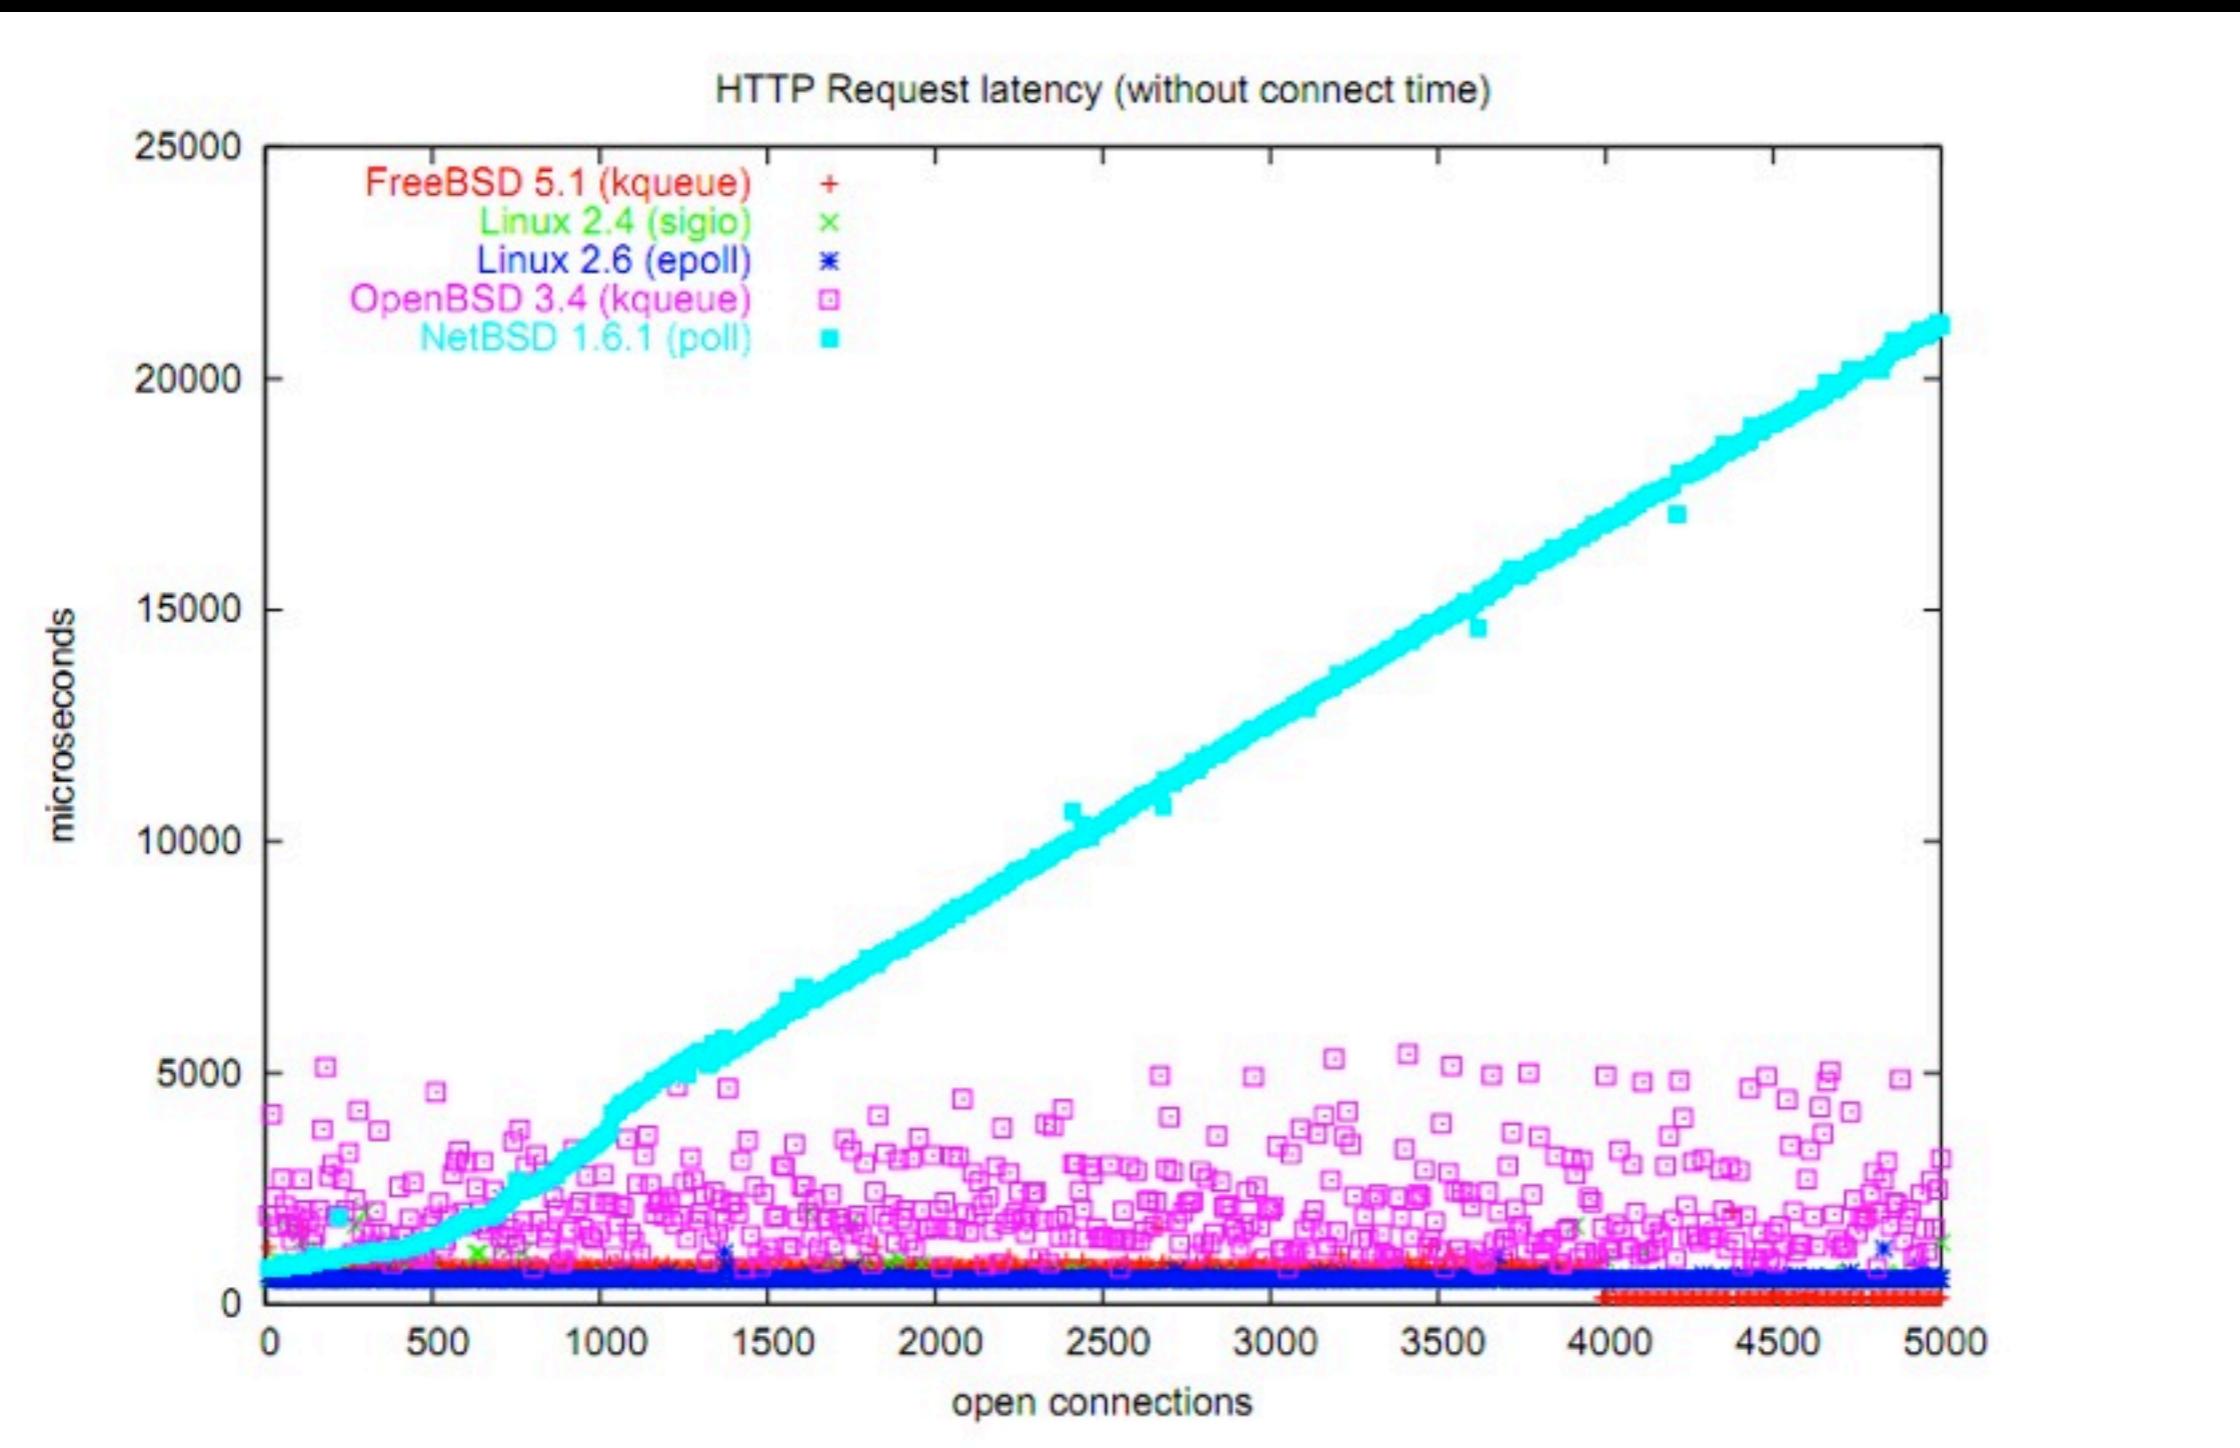

```
bytes_read = read(fd, buf, BUFSIZE);
```

someone understands callbacks

```
$("#header").onmouseover(function(){
    //do something
});
```

`alert("node")`

node.js

- js
- event loops are better than threads
- not awkward

ServerLand

POSIX

make the things you learn
in CSI07, CSI10, CSI40
similar to what you learn
in CSI42

```
fs.stat(path, [callback])
```

Asynchronous stat(2). The callback gets two arguments (`err`, `stats`) where `stats` is a `fs.Stats` object. It looks like this:

```
{ dev: 2049
, ino: 305352
, mode: 16877
, nlink: 12
, uid: 1000
, gid: 1000
, rdev: 0
, size: 4096
, blksize: 4096
, blocks: 8
, atime: '2009-06-29T11:11:55Z'
, mtime: '2009-06-29T11:11:40Z'
, ctime: '2009-06-29T11:11:40Z'
}
```

web development is
less than 10 years old.

best practices are
discovered everyday

jade

```
html(lang="en")
  head
    title Hello World!
  body
    h1 Jade - node template engine
    #container
      - if (youAreUsingJade)
        p You are amazing
      - else|
        p Get on it!
```

```
<html lang="en">
  <head>
    <title>Jade</title>
  </head>
  <body>
    <h1>Jade - node template engine</h1>
    <div id="container">
      <p>You are amazing</p>
    </div>
  </body>
</html>
```

chatrooms are so 2011

we have seen the holy
grail. but, why oh why
must thou be so
unholy?

{callback soup}

```
server.get('/sofo', function(req, res){  
  auth.verify(req, res, function(user){  
    db._select("videos", {"video_id" : [69, 70, 71]}, "", function(videos){  
      db._select("users", {"user_id" : _.pluck(videos, 'user_id')}, "", function(users){  
        db._select("cats", {"cat_id" : _.pluck(videos, 'cat_id')}, "", function(cats){  
          res.render('sofo', {  
            ...  
          });  
        });  
      });  
    });  
  });  
});  
});
```

CoffeeScript

```
# Objects:  
math =  
  root: Math.sqrt  
  square: square  
  cube: (x) -> x * square x  
  
# Splat:  
race = (winner, runners...) ->  
  print winner, runners  
  
# Existence:  
alert "I knew it!" if elvis?  
  
# Array comprehensions:  
cubes = (math.cube num for num in list)
```

Libraries

Stale or move
too fast.

Always read
code, not
documentation

```

Remember: you are the only
person in the world using it!

resist the temptation to try too many new things at once (especially DBs)
